Process Modeling And Comparison Study

This includes a discussion of what process modeling is, the goals of process modeling, and a comparison of the different statistical methods used for model building. Detailed information on how to collect data, construct appropriate models, interpret output, and use process models is covered in the following sections.

4.1. Introduction to Process Modeling

While representational analysis of a process modeling technique provides means for exploring strengths and weaknesses of that technique, it can also be used for the comparison of various techniques, thereby allowing for a comparative assessment to highlight representational differences between the considered techniques.

The main difference between data modeling and process modeling is that data modeling is the mechanism of creating a data model for an information system while process modeling is the mechanism of classifying the similar processes together into a model.. Data is important to every business organization. It is necessary to model data to make the maximum use of data.

Purpose. From a theoretical point of view, the meta-process modeling explains the key concepts needed to describe what happens in the development process, on what, when it happens, and why. From an operational point of view, the meta-process modeling is aimed at providing guidance for method engineers and application developers.

One of the most important aspects of process improvement projects is how long it takes to get results. The importance and calculation of the ROI for a process improvement project is frequently overlooked. This month, Kathy Long examines one aspect of the ROI for a process improvement project — the documentation or modeling of an organization's processes — with a comparison of four ...

Many consultants see BPMN as the "Rolls Royce" of business process modeling techniques because most other forms of business process modeling were developed for other purposes and then adapted. In fact, BPMN is the culmination of a process in which businesses sought a best practice method for business process modeling.
